CLOUD CELEBRITY BREACH SOLVED BY QNEXT TECHNOLOGY

TORONTO – Qnext technology offers solution to recent massive breach of cloud storage exposing Hollywood celebrity’s nude images. This revolutionary software remedies this more recent breach by allowing users to share images from any devices with the privacy and security of a private cloud. Qnext provides encrypted access and sharing to all types of storage and devices with no limitations as to specific storage methods.

Qnext offers a secure service allowing individuals to share files, photos, videos and more with a private cloud, which means local, on-premises content. Qnext software allows users the ability to create their own private cloud which securely connects users’ devices privately, as well as social networks, allowing for real-time remote secure file access, syncing and private sharing.

“Qnext helps keep your data safer by allowing you to keep more of your data on premise and by using sophisticated encryption,” said Anthony DeCristofaro, President & CEO. “Most people save photos to a cloud so they can have easy-access to share them in the future. We’ve eliminated that need and allow people to save everything to places that are secure and still be able to share them.”

“Imagine saving your precious family photos to your backup drive and then getting to access that drive from your mobile device,” said DeCristofaro. “Qnext securely connects users to the original data source and uses a patented technology to efficiently share original files/folders and manage content real-time to a single user or group. The Qnext user has complete control of access rights and privileges to the shared content.”

Qnext is the newest and most innovative solution to solving a problem that plagues individuals ranging from college students to professionals and large-scale business operations. This next generation solution to using web-based storage is what individuals and organizations are looking for as they migrate to safer, secure solutions using private clouds and file transfer. To expand the reach of Qnext technologies, it has partnered with Sugarman World Enterprises for support with integrated marketing and investor relations.

Qnext Corporation, created in 2013, is the cooperative venture of Oren Asher and Anthony DeCristofaro, who have almost 50 years of experience in the technology industry. Qnext Corp. is a global developer of private cloud technologies that securely connects user’s content from private and public clouds to any device in real-time. Qnext is committed to simplify and protect our digital life through innovation, imagination and state-of- the art technologies. Qnext patented social hybrid cloud platform is the first to offer secure access and sharing of files of any size from multiple storage and cloud locations from to anyone on privately. Qnext enable users to Securely Access, Share and Manage shared content via desktops, mobile, NAS, smart devices and Facebook
